Perfectha® is a **safe,¹ high-quality, surprisingly affordable** range of Hyaluronic Acid (HA) fillers.

One of the most popular cosmetic enhancements in the world.

HA is a substance naturally found in your body, that can be injected into your skin by a trained professional to add volume and enhance your features. Fillers have been safely used in this way for 25 years — it's the instant way to upgrade your look.

Q1 | HOW LONG DO PERFECTHA DERMAL FILLERS LAST?

Perfectha dermal fillers are not permanent. Long-term effects are dependent upon the depth and choice of the treatment required. Results can last up to 18 months.²

Q2 | HOW DOES PERFECTHA REDUCE FINE LINES AND WRINKLES?

Hyaluronic Acid is naturally present in the skin and helps prevent wrinkles by providing hydration and elasticity to the skin. However, ageing causes the breakdown of HA, causing the skin to lose its vitality and elasticity, leading to wrinkles appearing. Perfectha is a HA dermal filler, which is injected into different layers of the skin, providing effects that last up to 18 months² (dependent on treatment option(s) and area(s)).

Q3 | ARE THE EFFECTS OF PERFECTHA IMMEDIATE?

As well as gorge results, instantly, the great thing about fillers is that there is little downtime. So if you want to look on point for a big night, you can have a quick top up the day before and be good to go.

Q4 | WHERE CAN DERMAL FILLERS BE USED?

The Perfectha range comprises of 4 different products. Each Perfectha variant has been specifically developed for different treatment areas. This includes the nose, lips and cheekbones. They can treat many different signs of ageing, from fine lines around the eyes and lips, to deep wrinkles between the nose and mouth, and volume loss.

Q5 | ARE PERFECTHA DERMAL FILLERS SAFE?

Yes, Perfectha is considered very safe to use throughout the face and hands. It has a very low adverse event rate and has had a CE mark for use within the EU and European countries since 2007. It is registered and used in over 50 countries across the globe.³

Q6 | HOW OFTEN SHOULD I HAVE DERMAL FILLER TREATMENTS?

The period of time between Perfectha treatments will vary depending on the product used, treatment area(s) and individual differences. Sufficient healing time between treatments should be given and treatments not performed in the same area in the same session. Your physician will also have their own post-procedure timeline. They will assess your treatment results over time to determine the optimal times for 'top-ups'.

Q7 | WHAT ARE THE AFTERCARE RECOMMENDATIONS?

It is recommended to apply an ice pack to the treated area for 35-45 minutes within the first 24 hours to minimise swelling - be sure to wrap the ice pack, do not apply directly to your skin. We also advise not to apply any skin product — including make-up — to the injection site for 24 hours to avoid infections. Prolonged exposure to UV rays, temperatures below 0°C and Turkish baths should also be avoided for 2 to 3 weeks following treatment.

Q8 | ARE THERE ANY SIDE EFFECTS WITH PERFECTHA OR HA FILLERS?

Like all procedures of this type there is a possibility of adverse events, although not everybody experiences them. These adverse events include (but are not limited to); infection, minimal acute inflammatory tissue reaction (redness, swelling, rash, oedema, erythema, lumps/nodules etc.), pain (which may be temporary or persistent in nature), transient haematoma or bruising. For the full list of side effects refer to the Instructions for Use.

We understand you may have further questions. If that's the case, please feel free to reach out to our team on social media, or speak to a physician through our clinic finder:

References

Perfectha is a line of resorbable hyaluronic acid (HA) gel implants intended for reconstructive purposes in the treatment, for instance, of facial lipoatrophy, or morphological asymmetry associated with the aging process or other underlying conditions. Perfectha Lidocaine is for intradermal and subcutaneous application and is implanted in the areas of the face and hands to fill skin depressions and also for the augmentation of tissue volume.

Lidocaine hydrochloride 0.3% (w/w) is integrated into the product to reduce the sensation of pain during treatment.
